

Outcome

Router Configuration

- 1 Request timed out: router is not able to identify IP address of receiver node, in a given time.
- 2 Host unreachable: Direct connect is not established
- 3 Hop address.

So

So, when two end are not directly connected, connect individual router nodes ~~using~~ statically using CLI

Eg - R1 (configure) # ip route 30.0.0.0 255.0.0.0 20.0.0.1
