

## Configuring Default Route to Routers

Default route: All packets should blindly be routed from default route

We do not always need to specify the network address, we can set default route, so that packet coming from anywhere can be routed through that default route to next hop address.

R1# ip 10.0.0.2  
0.0.0.0 255.255.255.255
